

A standardized methodology for longitudinal assessment of corneal endothelial morphometry in eye banked corneas

Zala Lužnik, Zhongmou Sun, Jia Yin, Beth Ann Benetz, Jonathan H. Lass, Reza Dana

Supplementary Figure 1. Wide-field specular microscopy images before and after Trypan blue staining of the same donor cornea. A and B. Specular and Enhance mode endothelial images from the central area. C and D. Specular and Enhance mode images of the same donor cornea from the paracentral area after Trypan blue staining. Area with stained damaged endothelial cells was selected. Trypan blue positive damaged endothelial cells are indicated by white arrows. Scale bars 100 μ m.
